**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-44 are rejected under 35 U.S.C. 102(b) as being anticipated by Carter, III (hereinafter Carter).

Carter teaches a method and system for pricing products in multi-level product and organizational groups. In particular, for each of the plurality of products there are adjustments to the basic price. For example, there are applicable state and local taxes, shipping charges and discounts (column 2; lines 1-5) (Examiner notes that the adjustments of Carter are the same as the parameters of Applicant).

Cater further teaches, when a product is selected by the customer all applicable pricing adjustments are identified (associating a calculation code with said item) (column 3; lines 42-45). The price adjustments for a particular product are determined by retrieving the price adjustments for that product from a database table and applying them in sequence to arrive at a final price (applying calculation code to item to produce an amount, comprising associating a calculation rule and using calculation rule to produce amount) (column 3; lines 52-55 & column 3; lines 59-62).

Carter finally teaches the invention overcoming the disadvantage of having to “hard-code” the “business logic” into the pricing system, therefore the invention provides for flexibility

in formulating a desired pricing system while reducing the need to store, maintain and retrieve huge amounts of data (column 4; lines 1-11) (each operation maybe modified and the flow of execution remains the same).

Examiner notes that it is inherent to the system of Carter that the final price be output to a printer, a display device, a storage medium, a database or a connection device. One of these output means is necessarily present in the teachings of Cater in order to communicate the determined price to the customer.
